

I was only able to create the robot but not get it to move. I did not figure out how to use sliders and textures and should have come to office hours. I did not prioritize my time for this class because I thought it would be my easiest class since I enjoy graphics. It turned out to be my hardest class this semester but that is on me. I take full responsibility for my performance in class. I hope to have you again as a professor and I am sorry for my inability to be flexible with you and use you as a resource. Have a great summer!

KC
